

Plank grating D3

Aluminium gratings with a closed surface as an alternative to e.g. chequer plates. The raised D3 pattern provides good slip resistance and the opaque surface provides extra safety when walking on e.g. bridges or decks. OPTIMO grating D3 in aluminium is made by welding panels together and subsequently welding on either edge bars or kick flats to the aluminium grating. We design - in collaboration with the customer - grating decks and solutions, so that we find a product that suits your needs and also carry out cutouts for e.g. pipe penetrations etc.
