

Plank grating Plain

Steel 240 YP

Punched hole mesh gratings CUBE™ has a high strength-to-weight ratio which means that strength is maintained while weight is reduced. The greater the span, the lower is the weight – in relation to pressure-locked mesh gratings. The CUBE™ grating can be produced in three design variants depending on how much slip resistance is needed. CUBE™ mesh gratings are recommended in most constructions and industries where high air- or liquid flow are required.

Specifications

| | |
